

# How to Make a Clay Saw

National Park Service  
U.S. Department of the Interior

Saugus Iron Works National Historic Site  
Saugus, Massachusetts

## Step 1

Roll out a long flat piece of clay. You may use the rolling machine to do this.

## Step 2

Cut points along the edge of the saw. A blacksmith would call this shearing.

## Step 3

Bend the points in alternating directions to make the edge of the saw wider. A blacksmith would finish the saw by punch holes on the edge to attached handles with.
